THE PROBLEM

The crypto world is riddled with scammers and illegitimate projects.

Sadly, almost all investors have been a part of a scams, rug-pulls, honey-pots, etc.

Many investors believe the problem in the crypto space is the lack of security.

However, we see the problem differently. We believe the problem is actually a lack of unification of all available resources.

There are many security projects already working tirelessly to ensure the safety of the our community. The real problem is that there is no easy nor quick way to find the information reported by these projects.

The amount of effort it takes to find it causes investors to do little to no due dilligence or research on the legitimacy of tokens. Even if one of these security projects deems a token a scam, people will still end up investing in them because they simply aren't aware.

THE SOLUTION

We have found the solution to this problem—unification via our web-based database and the Shield Protocol (see more in the Shield Protocol section).

Shield will compile in-depth Risk Mitigation Reports from reputable security projects they have partnered up with and all of the pertinent information about the token in one easy-to-read Full Spectrum Report.

In essence, we will put all the necessary information for making an informed investment decision into one convenient area.

We also aim to inform the public of all the security projects that have a successful reputation.

One of our top priorities is to teach the crypto community good risk mitigation practices by leading them to great security projects that will teach their process to investors.

SHIELD DATABASE

The database will consist of two main components:

1. Token Pages
2. Partner Pages

As previously stated, our web-based database will contain all the necessary information about a token that will assist investors in making informed investment decisions quickly and with confidence. On top of that, we will also inform investors of all the security projects that currently exist so that they may have options in doing their due diligence.

This database will not only decrease the amount of time it takes for investors to find new projects, but allow them to compare and contrast potential risks quickly to make the best investment decision according to their personal investing strategies.

TOKEN PAGES

Token Pages are token-specific web pages where investors will be able to find all the pertinent information necessary to make an informed investment decision within mere minutes as opposed to hours or days.

The Full Spectrum Report for the token will be found on that token's page and consists of two main sections:

1. Token Report
2. Risk Mitigation Report

FULL SPECTRUM REPORT

Shield's goal is to help investors find new tokens and provide them with all of the information necessary to make an educated investment decision within minutes.

The best way to achieve that will be through our Full Spectrum Report.

Each sector will be done by two different partners with no affiliation to each other to ensure that nothing is overlooked.

This compiled information will be listed together on each token's specific page to alleviate the hassle of searching for it throughout different platforms.

TOKEN REPORT

INCLUDES:

- Name
- Dev team
- Social media links
- Tokenomics
- Use case/utility
- Whitepaper
- Link to chart
- Summary

RISK MITIGATION REPORT INCLUDES:

- Contract audit
- ID verification
- Wallet screening
- Token distribution

TOKEN REPORT

The Token Report is the section where all the important information regarding the token itself will be found.

The goal of the Token Report is to give the investor all the necessary information to understand what the token is and what their goals are.

Shield will compile all of this information from the token's own development team.

WHAT'S INCLUDED:

- Token name
- Launch date
- Tokenomics
- Utility
- Goals
- Whitepaper
- Social media links
- Website link
- Listed exchanges
- Development team
- Links to AMAs
- Chart
- Summary

RISK MITIGATION REPORT

The Risk Mitigation Report is the section of the Full Spectrum Report that touches on the safety of investments.

We are partnering up with reputable security projects to create each report.

Each of these security projects specialize and will report their findings in one of these four areas:

- Contract audit
- Identity verification
- Wallet screening
- Token distribution

We aim to have at least two separate security projects report on each of these areas.

This will minimize any key red flags being missed in each report.

PLEASE NOTE

Shield will NOT perform any of these processes.

Our job is to compile the information in an easy-to-read format for potential investors.

PARTNER PAGES

Each of Shield's security partners will have their own webpage that is 100% customizable to their liking.

These pages are mainly to bring awareness of what the partners do for the crypto community.

We will also have AMAs with the partners individually to teach the community their practices.

We will then post these AMAs in the respective Partner Page for that project, so that investors may learn how to do what these security projects do and how to execute these processes themselves.

INCLUDED INFO:

- Name
- Social media links
- Where to buy their token
- Summary of what they do
- Their process
- Who the team is composed of
- Their track record
- Chart

THE SHIELD PROTOCOL

We have created a process that will compile all of the pertinent information that we call the Shield Protocol.

The Shield Protocol is the distribution of information from the token's developer to our trusted security partners. This process is the most in-depth way for tokens to prove their legitimacy to the crypto community today.

Part of this process includes a comprehensive form for token devs to fill out in order to get all the necessary information for Shield's partners to do their reports.

There will be two different points of contact—one for the token and one for the partners.

Tokens that will be on Shield's database will not be interacting with security partners, with the exception of ID Verification during a monitored video call with that section's partner, in order to limit any potential biases.

PLEASE NOTE

Shield will NOT be conducting any type of audit, verification, nor screening.

Shield will NOT be vetting any projects, commenting on, nor changing any findings that the security partners report.

Shield is ONLY compiling all of the necessary information from the token and security partners in order to create the Full Spectrum Report in an easy-to-read and convenient format for the benefit of potential investors.
